

A STORYPANDA ORIGINAL

Leo's Brave Space Steer

Starring Leo

Space · ages 6-7

StoryPanda

Leo zoomed through the starry sky in his spaceship. Beside him, his best robot friend, Sparky, whirred happily. They were on their way to a brand-new planet called Lumina.

Sparky's blue eyes blinked. "Uh oh, Leo! We're coming to the Starry Maze. My navigation sensors are a bit fuzzy, so I need your excellent eyesight to guide us!"

Leo felt a flutter in his tummy. Guiding the ship through a maze sounded like a very big job. He quickly pressed a small button labeled "Auto-Steer Assist," hoping it would help.

Sparky's lights flickered. "Oh dear, Leo! That button is for 'Bumpy Path Bypass'! We're heading right towards the 'Sparkle Dust Clouds' now!" Leo felt a pang of guilt in his heart.

Leo looked out the big window. Glittering, swirling clouds of purple and silver dust sparkled just ahead. He felt a little scared and worried that he had made a mistake.

Sparky rolled closer. "It's okay, Leo," he beeped gently. "We can still fix it. You need to use the big navigation wheel to steer us away. I know you can be brave and try new things!"

Leo took a deep breath. He placed his hands on the large, glowing navigation wheel. It felt big and important, but he remembered Sparky's kind words about being brave.

With Sparky's gentle instructions, Leo turned the wheel. "A little left, now straight!" he heard. Leo focused hard, carefully steering the spaceship away from the swirling dust clouds.

"Hooray, Leo!" Sparky chirped. "You did it! We're past the Sparkle Dust Clouds and right back on course for Planet Lumina! You were so brave and clever to try that new thing!"

The spaceship landed softly in Planet Lumina's glowing forest. Leo and Sparky stepped out onto the bouncy grass, ready to explore. Leo felt proud that he had been brave and tried something new!

The End

Made with love for Leo.
Every child deserves to be the hero of their own story.
